### Oct 2019 — Nov 2021

Ho Chi Minh

### Frontend Developer at VietnamWorks

Team size: **9** ( with **3** in Frontend team )

**Project description :** This project is VietnamWorks website, which is the most popular and biggest channel in recruitment in Vietnam with million users.

**Responsibilities** as a front-end developer at VietnamWorks:

- **Communicating** with all team members when needed to solve problems as soon as possible. ( frontend/backend team, Product Owner and UI/UX designer )
- **Researching/Proposing** new techniques for solutions
- **Build Components/ Projects from scratch** with easy maintenance and reusable in the future.

Some **achievements** that I have done:

- **Search Jobs Page:** The main feature of VietnamWorks, which allows users to search their dream jobs going with the complex filter feature.

Technologies: **ReactJs 16.8, NextJS, Micro-frontend- , Redux-Saga, Algolia, Style Component, Webpack 4**

<https://www.vietnamworks.com/job-search/all-jobs>

- **Notifications and News:** A cloned version as the notification feature from Facebook ( the bell on the top right of the Header ), which notifies to job seekers when they have an interest from an employer or news from VietnamWorks

Technologies: **Firebase, Cookie, LocalStorage, IndexedDB**

- **Salary Page:** A page for users to seek current salary for a specific job title in any position. It is also going with Charts for visual references.

Technologies: **Amchart 4**

<https://www.vietnamworks.com/salary/all-jobs>

- **My Profile:** A page to create an online profile which is integrated directly to VietnamWorks database. This allows employers having an overview about potential candidates when searchable feature is turned on.

Technologies: **react-sortable-hoc, NextJS**

<https://www.vietnamworks.com/my-profile>

- **WowCv:** The latest feature from VietnamWorks, which has just released recently helps job seekers to create their beautiful CV with lots of available templates in minutes. Obviously, it is totally free.

Technologies: **Slick Slider, NextJS, React-PDF, IndexDB**

<https://wowcv.vietnamworks.com>

3rd libraries (momentJs, Lodash, postman)

Photoshop/Invision/Figma

## Languages

English

Mar 2018 — Oct 2019

## Frontend Developer at FPT Telecom

Team size: **15** ( with **3** in Frontend team )

**Project description :** This project is the internal CMS for FPT Wifi Marketing business which is mainly used to earn money from selling advertisement packages for clients

**Responsibilities** as a front-end developer at FPT Telecom:

- **Following** Scrum methodology to shortens the time to release our project and limit disadvantages in software development life cycles

- **Communicating** with other team members to clarify business logic before developing stages to avoid misunderstanding, which would lead to slow progresses.
- **Converting documentation/ UI mock-up** getting from my BA - Business Analyst to completed features in front-end side.
- **Researching/proposing** new techniques for solutions

**Some tasks/ works** I have done:

- **Dashboard page:** the page with lots of general information for admin, sales and publishers ( who are working directly with our clients ) check out daily and real-time ( by minutes and hours ) .
- **Flight page:** A big modal form to collect information from users for booking an advertisement

**Techniques project applied : Reactjs ( 15.6.2 ) , redux observable, Ant design ( 3.5.4 ) , Sass, Lodash, MomentJs, Rechartjs, Google API**
