## EXPERIENCE

**Freelancer**, Upwork

July 2021 - Present

**Oozou**, Ruby on rails developer (contract)

April 2022 - August 2022

**Freelancer**, Upwork

May 2021 - May 2022

**Danphe Software Labs**, Anamnagar — Rails - React Developer

Aug 2018 - Apr 2021

**Jyassa**, Gwarko — *Intern*

Jun 2016 - Aug 2016

**Techrise BootCamp**

2016

## SKILLS

1. Ruby on Rails
2. React
3. Stimulus Js
4. SQL  
(Postgresql, MySQL)
5. Redis
6. Git
7. REST API
8. GraphQL
9. ElasticSearch
10. BackgroundJob
11. Heroku
12. Slack app
13. Tailwind Css
14. Shopify
15. Solidity
16. Web3.js

## EDUCATION

**Rajdhani Model College**, Pipal Bot Marg — *MBA*

2019 - 2022

**Academia International College**, Gwarko — *BSc CSIT*

2016 - 2018

**DAV**, Jwalakhel — +2

2012 - 2016

**LVM**, Lagankhel — *SLC*

2014

## PROJECT DETAILS

### Ruby on rails projects

#### SlimFAQ

- Shopify App
  - Upgrade Shopify to use App Bridge
  - Fix links and authentication
- Integrate Platfrom api for custom domain

#### SlimWiki

- Slack App
  - Migrate slack app to use granular permission
- Add captcha v2

#### Oozou

- Upgrade rails 7
- Adding Filter section

## AWARDS

OpenHack(Virtual Hackathon)

<https://devpost.com/software/tweet-sentiment-worcloud>

Spirathon 2017(2nd Runner Up)

<https://ictframe.com/spiralogics-to-hold-spirathon-on-november-18-19-2017/team-rsr/>

NASA Space App 2017

NOSKode 2016 Winner

<https://ictsolved.github.io/noskode2016-winner/>

## [Rumineat](#)

Rumineat is a web app that allows to select the restaurants near by the location on specific radius. Rumineat allows users to select and vote for the restaurants on a session. This app uses rails api as it's backend server and react as it frontend. Rumineat uses google map and google places api to get the restaurants of different types offered by the google. Users on session are allow to vote for the restaurants and frequency table is displayed to the users on it's completion.

## [Petvet247](#)

Petvet is a platform to find near vets in the US in each state. The platform provide a blogging service for a vets to take care for the pets.

## [TradableCoins](#)

Freelancing project with full ownership from development to deployment. TradableCoins is a rails and react project. It is an alert messaging application for new crypto listings on different Exchanges. Tradable Coins is a monthly subscription that gives you email and SMS alerts the instant a new coin is listed on one of the major exchanges. It also has a trading bot built with 3commas that helps to trade the coins.

## [ServeSpark](#)

ServeSpack is CRM platform that manages clients, staff with their availability and service area. In this project I only worked for couple of months where most of the time I was on writing specs and fixing UI. I also worked on the the meeting module that would handle the video chat with the clients.

## **Heaven Match**

- Initial Project setup
- Database Modeling
- Integrated UI
- Integrated Authentication and Authorization
- Integrated scanner, react-table, filtering react
- Integrated Shopify, Recharge API
- Customize and integrate survey react

## Accountstory

Accountstory is a rails and react project. It collects data by scraping linkedin and google profiles and for external api. Those data are used to create companies and the profile of the company employees. The data are managed with the help of api.

### **Accountstory Chrome Extension** (<https://accountstory.com>)

- Implement UI design
- Integrated API
- Implemented business logic
- Add authentication along with google Oauth

## JobSpot College Project

It is my college project that recommends jobs to their job seeker. It consists of two different users job seeker and recruiter and an admin. It has full spec integration with rspec and capybara selenium.

## **Hackathon Projects**

*OpenHack(Virtual Hackathon)* <https://devpost.com/software/tweet-sentiment-wordcloud>

It was my first virtual hackathon and it was during the covid-19 crisis where I got to team up with developers from abroad. I had lead the team in building an platform where one can get the most used words for different sentiments from twitter tweets. Python was used to do the sentiment analysis and create api using flask. And for front end React is used to display the wordcloud for each sentiments.

### ***Spirathon 2017***

In this hackathon a web portal and android app was build. The portal was done with react js. The web and android was connected with firebase for realtime database. The idea was based on mental health where one can find community to share their feeling and get online treatment from doctors.

## **Blockchain hobby projects**

## Decentraram

An instagram clone decentralize image/video sharing platform. It uses IPFS for sharing peer-to-peer network for storing and sharing image/video in a distributed file system. It uses solidity to create a smart contract and react js for the front end view and connecting with metamask.

## CourseMarketPlace

An decentralize learning platform like udemy where smartcontract is in solidity and uses eth to purchase the courses and track the course of a user. It uses metamask to connect to the wallet.
