Score: 800/990
Issued by IIG Viet Nam

EXPERIENCES

1,5Y (08/2021 - NOW) VISION NETWORK VIET NAM

1. Build a web application that helps investors track and manage investments.

- Team size: 8 (including FE + BE + Test)
- Position: Key member (FE)
- Technologies: ReactJS (Functional component), Redux Toolkit, Ant Design, Styled Components, other JavaScript libraries.

Description:

- Assume primary responsibility for the project, from technology selection, project construction, to deployment in a client-side product.
- Work with data of stock market indicators, stock prices and stock ratings.
- Build charts from the data that returned from back-end.
- Build feature which allow investors to create investment portfolios, to connect portfolios with stock companies, to create stock market transactions, to consult the history of stock market transactions.
- Build feature allows investors to view detailed information about stock codes, allowing them to make good decisions about buying/selling shares, etc.
- The app includes both authentications and authorizations, login and logout feature, and content display permissions based on the product package purchased by the user.
- Work with the back-end team, require necessary api, support api testing.
- Work with the design team to propose appropriate user interface and user experience designs.

2. Landing pages

- Technologies: NextJS, Redux toolkit, Ant Design, Bootstrap
- Transform the Figma design into landing pages that introduces the company's products with SEO friendly and responsive optimization compatible with many screen sizes

3. CMS blog site

- Technologies: GhostJS CMS, ReactJS, SCSS
- Create a CMS blog site, including an administration page so that the content team can write articles and publish them on the company home page.
